Contents

Chapter 1	General introduction	11
Chapter 2	NOX2, p22 ^{phox} and p47 ^{phox} are targeted to the nuclear pore complex in ischemic cardiomyocytes colocalizing with local reactive oxygen species	23
Chapter 3	Nuclear NOX2/p47 ^{phox} -induced reactive oxygen species stimulate nuclear translocation of the transcription factor FOXO1 in ischemic cardiomyocytes, resulting in apoptosis	41
Chapter 4	Homocysteine-induced cardiomyocyte apoptosis and plasma membrane flip-flop are independent of <i>s</i> -adenosylhomocysteine. A crucial role for nuclear p47 ^{phox} expression	59
Chapter 5	Early NOX2 activation is crucial in phenylephrine-induced hypertrophy of H9c2 cells	81
Chapter 6	NOX5 expression is increased in intramyocardial blood vessels and cardiomyocytes after acute myocardial infarction in humans	99
Chapter 7	Homocysteine induced apoptosis in endothelial cells coincides with nuclear NOX2 and peri-nuclear NOX4 activity	119
Chapter 8	<i>s</i> -adenosylhomocysteine induces apoptosis and phosphatidylserine exposure in endothelial cells independent of homocysteine	141
Chapter 9	Homocysteine induces apoptosis of arterial smooth muscle cells via (peri)nuclear NOX4-induced reactive oxygen species	159
Chapter 10	Discussion	177
